Swimming Pool Safety Plan
Adapted for Hotel, Motels & Campgrounds
Supervision Level IV

Name of Facility: ________________________________
Site Address: __________________________________
Telephone: ____________________________________
Prepared by: __________________________________
Title: _________________________________________
Signature: __________________________ Date: ________

New York State Sanitary Code 6-1 requires that swimming pool operators develop, update and implement a written safety plan. This plan must be submitted to your local health department for their review and approval. The plan must include procedures for daily bather supervision, injury prevention, reacting to emergencies, injuries and other incidents, providing first aid and summoning help.

Please review and complete this document. Include any attachments (i.e. photos), as necessary. Once completed, it will serve as your facility’s comprehensive written safety plan, which will meet the requirements of the State Sanitary Code (SSC). This plan must meet the specific conditions of your facility and operations, as well as serve as a training and reference document for you and your staff. Local rescue, police and fire personnel should be consulted when developing your pool safety plan.

Additional information may be obtained at www.nyhealth.gov

Please send a copy to:

Cortland County Health Department
Environmental Health Division
60 Central Ave.
Cortland, NY 13045

And, please retain a copy of this document for your use.

For LHD use only

Swimming Pool Safety Plan

Bather Supervision

- The effective supervision of all bathers is essential to safety. **Inadequate supervision has been determined to be a contributing cause in over half of all drownings at regulated bathing facilities in New York State.**

- A system is to be established that allows for continuous supervision and adequate visual surveillance of the bathers. This system will vary depending on the level of supervision required at each facility type.

- When a swimming pool, spa pool or wading pool is part of a temporary residence or campground as defined in SSC Subparts 7-1 and 7-3, the operator must provide either Supervision Level IIa, IIb, III, or IV aquatic supervision, as defined in SSC Subpart 6-1.

---

Swimming Pool Safety Plan

Bather Supervision – **Supervision III or IV**

**Supervision Level III or IV**

- Are supervisory staff, provided by the facility, who possess certain skills and requirements per Section 6-1.31.

- May be selected when the bathing facility is part of a temporary residence or campground.

- If part of a temporary residence or campground, when Supervision Level III or IV is selected, on-premise CPR is not required.

- If a temporary residence or campground operator **allows persons other than registered overnight patrons and their guests to use the pool**, then the operator must provide a level of supervision during that period of use which is consistent with the pool characteristics. (Please refer to Subpart 6-1.23(a)(2).)
  - Pools with surface area greater than 2000 square feet, water depth 5 feet or more, diving boards, flotation devices (other than U.S. Coast Guard Type I - III Label), or pool deck slides must provide Supervision Level II, a lifeguard.
  - When a pool otherwise qualifies for Supervision Level III or IV, on-premise CPR certified staff are required.

---

**Supervision Level IV**

- Supervision Level IV may be selected if the water depth within the designated bathing area is less than five feet and the surface area of the pool is less than or equal to 2000 square feet.

- At Supervision Level IV, the aquatic staff shall be on premises at all times the pool or spa is in use with periodic visual checks of the pool or spa conducted and logged.

*If “yes” to question above, please continue with questions 18 - 70.*
Swimming Pool Safety Plan

Swimming Pool Safety Plan

Bather Supervision – **Supervision III or IV**

- If the pool is part of a temporary residence or campground, when Supervision Level III or IV is selected, the operator shall not allow the use of the pool by persons other than registered overnight patrons of the temporary residence or campground and their guests.

- If a temporary residence or campground operator **allows persons other than registered overnight patrons and their guests to use the pool**, then the operator must provide a level of supervision during that period of use which is consistent with the pool characteristics. (Please refer to Subpart 6-1.23(a)(2).)
  - Pools with surface area greater than 2000 square feet, water depth 5 feet or more, diving boards, flotation devices (other than U.S. Coast Guard Type I - III Label), or pool deck slides must provide Supervision Level II, a lifeguard.
  - When a pool otherwise qualifies for Supervision Level III or IV, on-premise CPR certified staff are required.

18. Is your bathing facility part of a temporary residence or campground?  
   Yes  No  
   (If “Yes”, please complete a.)

   a. Do you allow persons other than registered overnight patrons to use your pool?
      - **If “Yes”, and you are required to provide Supervision Level II,**  
        (See text box above), please complete the Supervision Level II questions.

19. Is your facility required to provide on-premise CPR certified staff?  
   Yes  No  
   (If “Yes”, please complete a, b, and c.)

   a. Who is the on-premise CPR certified staff?  
      Owner/Operator  Facility Manager  Other (specify) __________________________

   b. How is this person summoned to the emergency?
      This person is always within hearing distance of the pool area.
      By telephone
      Cell phone that the person carries at all times
      Other (specify) __________________________

   c. What is the response time for this person in the event of an emergency at the pool area?
      Within 1 minute  1 - 3 minutes  Other (specify) __________________________

**A drowning victim has the greatest chance of survival if CPR is initiated immediately.**

- If a drowning victim is rescued and effective ventilation and circulation is restored within 0 - 3 minutes of submersion, the victim has an excellent chance of normal survival.
- The longer the time period, the more probable it is that permanent neurological damage or death will occur.

Please refer to the Emergency Response section on Pages 25 - 29 for additional information.
Swimming Pool Safety Plan

Bather Supervision – **Supervision III or IV**

**Daily Monitoring**

- **Supervision Level III** aquatic staff must be at pool side, providing direct supervision of pool patrons.
- At spa pools, the Supervision Level III aquatic staff must be on the premises and provide periodic supervision as specified in the safety plan.

20. Who is the Supervision Level III or IV staff who provides visual surveillance/periodic supervision and is on the premises during the times the pool or spa is in use?

- Owner/Operator
- Facility Manager
- Other (specify) __________________________

21. How often does the Level III or Level IV staff monitor the bathing facilities throughout the day?

- 1-2 times/day
- 2-5 times/day
- more than 5 times/day
- Other (specify) ____________________________________

**Supervision IV**

**Daily Monitoring**

- **Supervision Level IV** includes a combination of daily monitoring, posting required warning signs, providing patrons with the required rules in writing, enforcing all rules, providing conveniently located emergency communication and providing required safety equipment. To be in compliance with Supervision Level IV requirements, all of these components must be in place. (Please refer to SSC Section 6-1.23(a)(10).)

22. Who monitors to see that the rules are being followed?

- Owner/Operator
- Facility Manager
- Maintenance Staff
- Other (specify) __________________________

23. Who is responsible for performing the daily compliance check (including safety equipment, water conditions, and hazard checks), prior to the pool opening each day?

- Owner/Operator
- Facility Manager
- Maintenance Staff
- Other (specify) __________________________

24. Who maintains the daily log?

- Owner/Operator
- Facility Manager
- Maintenance Staff
- Other (specify) __________________________
Swimming Pool Safety Plan

Bather Supervision – **Supervision IV**

**Rules and Regulations**

- **Supervision Level IV** facilities must post specific pool rules which state:
  - *Two or more adults (18 years or older) must be present at the pool when pool is in use, with at least one adult on the pool deck.*
  - *Children less than 16 years must at all times be accompanied by a parent or guardian or similar adult responsible for their safety and behavior while at the bathing facility.*
  - *Shallow Water – No Diving (for pools with water depths less than 8 feet.)*
  - *Method of summoning on-premise CPR staff (only where CPR trained staff is required.)*
  - *Location of free telephone and emergency numbers*

**Required Sign**

25. Where is the required sign located?

- Pool Entrance
- Poolside
- Other (specify) __________________________

**Required Notification of Patrons**

- Patrons must be provided with a written statement or brochure before they use the bathing facility. *(Please refer to SSC Section 6-1.23(a)(10)(vii).)*
- *It is recommended that patrons be provided this information at the front desk at the time of check-in or at the time a lease agreement is signed with periodic reminder notices.*
- *In drowning investigations at Supervision Level IV facilities, failing to provide patrons with the written statement or brochure has been documented in many of the incidents.*

26. Is a written statement or brochure indicating the required rules provided to all patrons? **Yes**

27. How and when is this information provided? *(Check all that apply.)*

- At the front desk at the time of check-in
- Patrons must sign saying they have received it
- Other (specify) __________________________

- **Please enclose a copy of this brochure.**

**Certifications – **Supervision Ila, IIb, III, IV**

- It is the responsibility of the facility owner/operator to make sure that the supervisory aquatic staff they hire have the proper skills and certifications.
- Copies of these certifications must be maintained on-site and be available for inspection by DOH staff. *(Please contact your LHD for a list of acceptable courses.)*
- Please refer to Section 6-1.31 for aquatic supervisory skill requirements.
Swimming Pool Safety Plan

Injury Prevention

- The most important responsibility of a bathing facility operator and supervisory staff is the prevention of injuries at the facility. There should be an ongoing comprehensive safety program at your facility.

Voluntary Hyperventilating and Extended Breath Holding

- The practice of voluntarily hyperventilating (taking a series of deep breaths in rapid succession and forcefully exhaling) followed by underwater swimming or holding your breath for extended periods of time is dangerous and has led to deaths.
  
  - When you hyperventilate, you lower the percentage of carbon dioxide in the air that always remains in your lungs.
  - The carbon dioxide in the bloodstream is what triggers that part of the brain that controls breathing to initiate taking a breath.
  - By decreasing the available carbon dioxide, you can remain underwater because you delay the point at which the brain signals the need to take a breath.
  - When the oxygen level in the blood runs low before the carbon dioxide level rises to the point that triggers the breathing reflex, the swimmer loses consciousness.
  - The swimmer never actually feels as though a breath is needed.

Shallow Water Blackout

- Swimmers who practice prolonged underwater breath-holding are at risk for Shallow Water Blackout (SWB).
- SWB results from an insufficient amount of carbon dioxide to activate the body’s natural impulse to breathe.

- Victims of hyperventilation and SWB are often skilled swimmers.
- Victims can also be children and others who participate in ‘hold your breath’ games.
- Lifeguards and other supervisory staff should be alert for this safety hazard and should discourage this behavior.
- Operators should consider posting a sign explaining this hazard and prohibiting it at their pool.

Waterfront Hazards

- Identify potentially hazardous areas such as entrance areas to pools, which can be slippery, diving boards, deck slides, starting blocks, fill spouts, etc. Such areas should be eliminated, marked to help patrons avoid the areas, or additional supervision provided for these areas.

28. Are there any potentially hazardous areas at your pool?

<table>

<tr>
<th>Owner/Operator</th>
<th>Maintenance Staff</th>
<th>Other (specify)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Facility Manager</td>
<td>Lifeguard</td>
<td></td>
</tr>
</tbody>
</table>

Lighting and Electrical

- Any defects in the electrical system, including underwater or overhead lights must be immediately repaired.
- Portable electrical devices, such as radios and announcing systems within reach of the bathers are prohibited.
- Underwater lights must allow an observer on deck to clearly see the whole pool, including the bottom.
- If night swimming is allowed, lighting must be sufficient to allow an observer on deck to clearly see the pool bottom.
- Adequate emergency lighting must be provided at swimming pools where night swimming is allowed and at indoor pools where no natural light is present. For outdoor pools, a portable battery powered artificial light source (i.e. flashlight) is acceptable if adequate and maintained to assist during pool evacuation.

31. Do you allow night swimming at your facility? Yes  No

32. Does your pool have underwater lights? Yes  No

33. What do you have for emergency lighting?

<table>
<thead>
<tr>
<th>Mounted lights</th>
<th>Flashlight</th>
<th>Other</th>
</tr>
</thead>
</table>
Swimming Pool Safety Plan

Injury Prevention

Maintenance

- Daily inspections of the facility are necessary to assure that adequate safety levels are maintained. Any problems, such as unsafe water conditions, broken equipment, loose ladders, electrical equipment malfunctions, broken/loose main drain grates, etc. are to be reported and immediately corrected. If the problem cannot be immediately corrected, the specific area or entire bathing facility should be closed, as appropriate.

34. Who is responsible for performing the daily compliance check (including safety equipment, emergency lighting, water conditions, and hazard checks), prior to the pool opening each day?

<table>
<thead>
<tr>
<th>Owner/Operator</th>
<th>Maintenance Staff</th>

</tbody>
</table>

36. How is the main drain grate inspected each day?

<table>
<thead>
<tr>
<th>Visually</th>
<th>Reach pole</th>
<th>Other (specify)</th>
</tr>
</thead>
</table>

Rules and Regulations

- Operators must post signs stating the maximum capacity of the pool, hours during which the pool is open and that swimming at other times is prohibited.

- Signs stating general rules must be posted conspicuously at the pool, dressing rooms and facility offices. These rules should prohibit urination, discharge of fecal matter, spitting and nose blowing, as well as govern the use of diving boards and slides. These rules may also include prohibitions against running, horseplay, the use of alcohol, etc.

- Spas have additional requirements including that warning signs stating specific cautionary statements must be conspicuously posted in the vicinity of the spa. (Please refer to SSC Section 6-1.29, item 14.13.)

37. Where are your rules posted? (Check all that apply.)

<table>
<thead>
<tr>

<td>Lifeguard</td>
<td></td>
</tr>
</tbody>
</table>
Swimming Pool Safety Plan

Injury Prevention

Diving Areas

- Diving areas require extra attention due to the potential for serious injury. Rules for the use of diving equipment should be developed, posted at the diving area and enforced.
- Diving from the pool deck is prohibited in water less than 8 feet deep except during competitive swimming or swimmer training activities. (Please refer to SSC Section 6-1.10(I).)
- Warning signs stating “No Diving” must be clearly posted in areas where diving is not allowed.

39. Do you allow diving at your pool?  Yes  No

   a) If no, are warning signs stating “No Diving” clearly posted?  Yes

   b) Where are the diving rules clearly posted?  

   c) Who enforces these rules?

      Owner/Operator  Maintenance Staff  Other (specify)  

      Facility Manager  Lifeguard  

- Most spinal cord injuries associated with diving incidents occur in water depths less than 6 feet.

Swimming Pool Safety Plan

Injury Prevention

Environmental Conditions and Weather

- Environmental conditions must be constantly evaluated at all bathing facilities. Conditions which may require that the pool be cleared of bathers include: unsanitary water conditions, inadequate disinfection levels, cloudy pool water, glare, spa water temperature over 104°F, power outages, and thunderstorms.

- Each facility should have procedures in place for clearing the water when necessary. These procedures should include who is responsible for monitoring pool closure and what type of communication system will be used.
Lightning Tips

- The National Lightning Safety Institute (NLSI) recommends closing both indoor and outdoor bathing facilities during a thunderstorm.
- The NLSI recommends that bathing facilities monitor storm activities, suspend swimming activities when lightning is within 6-8 miles and wait until 30 minutes after lightning has been observed before resuming water activities.

- Designate a responsible person as the weather safety lookout. That person should keep an eye on the weather. Use a “weather radio” or the Weather Channel or other TV program to obtain good localized advanced weather information.
- When thunder and/or lightning are first noticed, use the Flash-To-Bang (F-B) method to determine its rough distance and speed. This technique measures the time from seeing lightning to hearing associated thunder. For each five seconds from F-B, lightning is one mile away. Thus, a F-B of 10 = 2 miles; 15 = 3 miles; 20 = 4 miles; etc. At a F-B count of thirty, the pool should be evacuated. People should be directed to safe shelter nearby.
- Swimming activities should remain suspended until thirty minutes after thunder or lightning were last observed.

Swimming Pool Safety Plan

Injury Prevention

Environmental Conditions and Weather

44. What communication system is used for clearing the pool?

- Whistle (specify signal) ________________________________
- Bullhorn (specify signal) ________________________________
- Voice (specify) ________________________________
- Other (specify) ________________________________

45. When will you allow re-entry into the water?

- After at least 30 minutes without any thunder or lightning
- Other (specify) ________________________________
Illness Prevention

Fecal, Vomit, Blood Contamination Incidents

- Fecal, vomit and blood incidents which occur at pools pose a potential risk of infection to bathers. Feces, vomit and blood may contain pathogenic or harmful bacteria, viruses and parasites that are resistant to chlorine at concentrations found in a pool under normal operating conditions. Special precautions must be taken to ensure that the water is made safe for bathers.
- Swimming pool operators must respond differently to formed stool vs. diarrhea in the swimming pool. Diarrhea may be an indication that the person is ill with pathogens such as the highly chlorine-resistant parasite, *Cryptosporidium*. More stringent measures must be taken to sanitize the pool when diarrhea discharges occur.

Chemical Storage and Handling

- Improper handling of pool chemicals can result in explosions, fires or poisonous gas. Procedures for safe storage and handling must be developed and staff trained in safe practices. Safety rules should be prominently posted in the chemical use area.
- Safety rules should include:
  - Follow manufacturer’s Instructions.
  - Never add water to chemicals. Always add chemicals to water.
  - Wear eye protection when handling chemicals and breathing protection for chlorine gas.
  - Never mix any chemical with chlorine products. A dangerous chlorine gas could develop immediately.
  - Always use a clean scoop when dispensing powdered chlorine as a potential fire hazard exists.
  - All chemicals, including dispensing crocks, must be clearly labeled.
  - An evacuation plan for facilities using chlorine gas.

Chemical Storage and Handling

46. What type of disinfection do you use in your pools/spas? (Check all that apply.)

- Sodium Hypochlorite (liquid)
- Chlorine Gas
- Other (Please specify) __________
- Calcium Hypochlorite:
  - Powder
  - Tablet
- Bromine (solid) _________________
47. How are chemicals for pH adjustment added to the pool/spa?

Mechanical Feed Equipment  By hand when the pool is closed, remaining closed until chemicals are evenly distributed and the pH is acceptable and determined by testing.

48. Where do you store your chemicals?

49. Is this storage area inaccessible to the public and kept locked? Yes  No

   a. If No, please explain how unauthorized access is prevented?

50. Do you have established safety rules and are they posted in the storage area? Yes

51. Who is responsible for maintaining the chemical levels in your pool/spa?

   Owner/Operator  Maintenance Staff  Other (specify)  
   Facility Manager  Lifeguard

Rob Spas must be chlorinated to 10 mg/L at least once a week when the pool is not in use.
   • This is true for spas using either chlorine or bromine as the disinfectant.

Spas must be drained and cleaned when needed, and at least once every two weeks.
   • The need to replace the water is based on bather load.
   • This water replacement interval can be calculated as follows:

   Water Replacement Interval (days) = Spa Gals ÷ 3 ÷ Average Users per Day

   Example: 600 gallons ÷ 3 = 200 ÷ 25 (average users per day) = 8 days (water replacement interval)

52. How often is the spa drained and cleaned?

   N/A  Once/2 weeks  Once/week  Other (specify)

53. How often is the spa chlorinated to 10 mg/L?

   N/A  Once/week  Twice/week  Other (specify)

Swimming Pool Safety Plan

Emergency Response

   • An effective prevention program will greatly reduce the occurrence of injuries. Any delay in response may increase the degree of injury or lead to death. A written procedure responsive to potential incidents or emergency situations must be developed and practiced.
   • An emergency should be considered as any situation that jeopardizes the health and safety of a patron or diverts the supervisor’s attention from general supervision of bathers.
   • The facility name and street or 911 number should be clearly posted for emergency personnel to easily identify the address.
   • Local rescue, fire and police personnel should be consulted when developing an emergency response plan.
Search Procedures

➢ Time can be critical when searching for a lost bather. Lifeguards are trained in proper search methods and these can vary depending on the facility characteristics. Specific water search procedures should be established. Obtain a description of the missing individual and last location seen. A simultaneous land and water search should be initiated immediately.

Emergency response procedures must include:
• Clearing the waterfront area
• Emergency care of the victim
• Contacting emergency personnel
• Crowd control
• Meeting and guiding emergency personnel to the site and/or victim
• Directing traffic
• Drills for emergency response situations

Swimming Pool Safety Plan

Emergency Response

Search Procedures

54. Who is responsible for performing a lost bather search at your facility?
(Please answer b, if applicable.)

b) Supervision Level III or IV Facilities/Homeowner Associations

Owner/Operator  Facility Manager
Maintenance Staff  Other (specify) ______________________

55. Describe your lost bather search procedure. ________________________________________________________________
________________________________________________________________________________________________________
Communication

- Communication is essential during an emergency. A chain of command should be developed as part of an emergency response plan. A phone or other acceptable means of communication must be provided at a convenient location at all pools. All staff should know the location of the nearest telephone. Emergency phone numbers must be prominently posted at the telephone(s). A method of communication between staff such as whistles or hand signals should be established and staff should be familiar with it.

56. Is there a chain of command established for your facility during an emergency? Yes
57. Is a telephone or other means of communication readily accessible at the pool? Yes
   a) Describe other

Swimming Pool Safety Plan

Emergency Response
Communication

58. Where is the emergency phone with emergency numbers located?
   - Pool Area
   - Bathhouse
   - Facility Office
   - Other (specify)

59. How far is the emergency phone from the pool area?
   - Poolside
   - 51 – 100 feet
   - More than 200 feet
   - 5 - 50 feet
   - 100 – 200 feet
   - Other (specify)
60. Please indicate the emergency numbers ______________________________

______________________________

61. Where is the first aid room or first aid kit located?

Poolside          Bathhouse          Facility Office

Other (specify) _______________________

62. Who is responsible for performing crowd control duties in the event of an emergency at the pool?

Owner/Operator          Maintenance Staff          Other (specify)  __________

Facility Manager          Lifeguard

Swimming Pool Safety Plan

Emergency Response

Communication

63. What is your planned route to be used for emergency response and evacuation at your facility?

____________________________________________________________________

____________________________________________________________________

____________________________________________________________________

64. Who is responsible for meeting the emergency vehicle and directing it to the site?

Owner/Operator          Maintenance Staff          Other (specify)  __________

Facility Manager          Lifeguard

Reporting

➢ The operator must keep daily records which indicate the number of bathers, number of lifeguards on duty, weather conditions, water clarity, water quality, any reported rescues, injuries and illnesses. These records must be available for review by the Permit Issuing Official for at least 12 months.
65. Who is responsible at your facility for maintaining the required daily records, including the injury/illness log?

Owner/Operator  Maintenance Staff  Other (specify) _______________
Facility Manager  Lifeguard  ________________________

66. Who is responsible at your facility for reporting any of the above to the PIO?

Owner/Operator  Maintenance Staff  Other (specify) _______________
Facility Manager  Lifeguard  ________________________

Training

- All staff involved in emergency response must be trained. Frequent training to reinforce the principles and rehearse the plan must be conducted.
- Supervisory staff must also practice their lifesaving skills regularly to remain proficient and able to perform rescues when required.

Swimming Pool Safety Plan

Emergency Response

Training

67. How often do staff practice the emergency response drills?

Once/week  Twice/month  Other (specify) _______________

68. Who is responsible for conducting these trainings?

Owner/Operator  Maintenance Staff  Other (specify) _______________
Facility Manager  Lifeguard  ________________________

69. Who participates in this training? (Please list job titles.)

70. Sketch below or attach a diagram or photograph(s) of the pool(s). Sketch must include:

- If you provide lifeguards, show the location of lifeguard positions and areas of lifeguard coverage for each position. Indicate how you adjust for factors which could affect adequate supervision and coverage, such as glare, blind spots, bather load and density.
- If you use a Level III aquatic supervisory staff, please show the location for this person(s) position.
- Areas of responsibility for patron surveillance
- Float line placement
- Diving boards and slides
- Access points and sign locations
- First aid stations, emergency/lifesaving equipment and telephone locations

Please attach additional pages, if necessary.
